

Modulating control valves **MXG461...** PN 16 with magnetic actuators **MXF461...**

for chilled and low-temperature hot water systems

- Fast positioning time (< 2 s), high-resolution stroke (1 : 1000)
- Equal-percentage or linear valve characteristic (user-selected)
- High rangeability
- Operating voltage AC 24 V
- Switch-selected control signal DC 0/2...10 V or DC 4...20 mA
- DC 0...20 V phase cut control signal with SEZ91.6 external interface
- Indication of operating state
- Positioning control, position feedback and manual control
- Wear-free inductive stroke measurement
- Fail-safe feature: A → AB closed when de-energised
- Low friction, robust, no maintenance required

Use

The control valves are mixing or throughport valves. They are supplied with the magnetic actuator ready fitted, equipped with an electronics module for position control and position feedback.

The short positioning time, high resolution and high rangeability make these valves ideal for modulating control of chilled and low-temperature hot water systems in closed circuits of heating, ventilating and air conditioning systems.

Valves for media containing mineral oils: refer to data sheet N4456.

Special silicon-free version available, type suffix ...M.

Type summary

Type reference	DN	k_{vs}	Δp_{max}	Δp_s	S_{NA}	P_{med}	I_N	Wire cross-section [mm ²] 4-wire connection 1,5 2,5 4,0 Max. cable length L [m]		
		[m ³ /h]	[kPa]	[kPa]	[VA]	[W]	[A]

MX...461.15-3.0		3.0								
MX...461.20-5.0	20	5.0								
MX...461.25-8.0	25	8.0								
MX...461.32-12	32	12								
MX...461.40-20	40	20			44	6	4	40	70	110
MX...461.50-30	50	30								
MXF461.65-50	65	50			46					

... = F for flanged valves
G for screwed valves

Δp_{max} = max. permissible differential pressure across the valve's control path, valid for the entire actuating range of the motorised valve

Δp_s = max. permissible differential pressure (close off pressure) at which the motorised valve will close securely against the pressure (used as throughport valve)

S_{NA} = nominal apparent power for selecting the transformer

P_{med} = typical power consumption

I_N = required slow fuse

k_{vs} = nominal flow rate of cold water (5 to 30 °C) through the fully openend valve (H_{100}) at a differential pressure of 100 kPa (1 bar)

L = max. cable length; with 4-wire connections, the max. permissible length of the separate 1.5 mm² copper positioning signal cable is 200 m

Flanged valves DN80, DN100: M3P80FY, M3P100FY, refer to data sheet N4454

Valves for media containing mineral oils with type suffix ...P (MXG461...P, MXF461...P), refer to data sheet N4456

Silicon-free valves with type suffix ...M (MXG461...M, MXF461...M)

Accessories

Type reference	Description
ALG...3 (... = DN)	Set of 3 screwed fittings for 3-port valves, consisting of - 3 union nuts - 3 discs and - 3 flat seals
Z155/... (... = DN)	Blank flange set with blank flange, seal, screws, spring washers and nuts
SEZ91.6	External interface for DC 0...20 V phase cut control signal, refer to data sheet N5143

Order

When ordering, please give quantity, product name and type reference.

Example:
3 screwed valves MXG461.25-8.0
3 sets of 3 screwed fittings ALG253
4 flanged valves MXF461.20-5.0
2 blank flange sets Z155/20F

Delivery

Valve body and magnetic actuator form one assembly and cannot be separated.
The screwed fitting sets and blank flanges are packed and supplied separately.

Replacement electronics module ASE1, ASE2

Should the valve electronics prove faulty, the electronics module must be replaced by the ASE1 (DN15...32) or ASE2 (DN40...65) replacement electronics module.
Mounting Instructions no. 35678 are included.

For a detailed description of operation, refer to data sheet CA1N4028E.

Control operation

The electronics module converts the positioning signal to a phase-cut power signal which generates a magnetic field in the coil. This causes the armature to change its position in accordance with the interacting forces (magnetic field, counterspring, hydraulics). The armature responds rapidly to any change in signal, transferring the corresponding movement directly to the valve plug, enabling fast changes in load to be corrected quickly and accurately.

The valve's position is measured continuously (inductive). The internal positioning controller balances any disturbance in the system rapidly and delivers the position feedback signal. The valve stroke is proportional to the positioning signal.

Spring return facility

If the positioning signal is interrupted, or in the event of a power failure, the valve's return spring will automatically close control path A → AB.

Control

The magnetic actuator can be driven by a Siemens controller or a controller of other manufacture that deliver a DC 0/2...10 V or DC 4... 20 mA output signal. To achieve optimum control performance, it is recommended to use a 4-wire connection.

Operator controls and indicators in the electronics housing

- 1 Connection terminals
- 2 Hand wheel
- 3 Opening for autocalibration
- 4 DIL switch for mode control

- 5 LED for indication of operating stat

Indication of operating state

The two-colour LED display indicating operating status can be viewed by opening the cover of the electronics module.

LED	Indication	Function	Remarks, troubleshooting
Green	Lit 	Control mode	Automatic operation; everything o.k.
	Flashing 	Calibration In manual control	Wait until calibration is finished (green or red LED will be lit) Hand wheel in MANUAL or OFF position
Red	Lit 	Calibration error	Recalibrate (operate button in opening 1x)
	Flashing 	Internal error Mains fault	Replace electronics module Check mains network (outside the frequency or voltage range)
Both	Dark 	No power supply Electronics faulty	Check mains network, check wiring Replace electronics module

As a general rule, the LED can assume only the states shown above (continuously red or green, flashing red or green, or off).

Manual control

MANUAL

The valve control path (ports A → AB) can be opened manually to between 80 and 100% of the full stroke (depending on DN) by pressing the hand wheel inwards and turning it clockwise (MANUAL setting). This disables the control signal from the controller, the green LED is flashing.

OFF

To disable automatic control of the valve, press the hand wheel inwards and turn it anti-clockwise (to the OFF position). The valve will close, the green LED is flashing.

AUTO

For automatic control, the hand wheel must be set to the AUTO position (the hand wheel will spring out), the green LED is lit.

Calibration

The MX...461... magnetic valves are factory-calibrated at 0 % and 100 % stroke.

When commissioning the valves, however, (especially under extreme conditions of use) there may still be some leakage via control path A → AB with a 0 % stroke control signal (DC 0 V, DC 2 V or DC 4 mA). In this case, the valve can be recalibrated simply and quickly:

1. Hand wheel in AUTO-position
2. Use a pointed implement (\varnothing 2 mm) to operate the button in the opening [3] once
3. While recalibration is in progress, the LED [5] is flashing green for approximately 10 seconds.
The valve will be briefly closed and fully opened.

If the electronics module is replaced, the valve's electronics must be recalibrated. For that, the hand wheel must be set to AUTO.

Configuration DIL switches

Switch	Function	ON / OFF	Description
 1	Valve characteristic	ON	\dot{V}_{\log} (equal percentage) ¹⁾
		OFF	\dot{V}_{lin} (linear)
 2	Positioning signal Y	ON	DC 2...10 V, DC 4...20 mA
		OFF	DC 0...10 V ¹⁾
 3	[V] or [mA] assignment	ON	[mA]
		OFF	[V] ¹⁾

1) Factory setting

Assignment positioning signal Y: Voltage or current			Selection of valve characteristic (Positioning signal against volumetric flow): Equal-percentage or linear			
 Y	 ON	 ON	 	4465Z08		
	 ON	 OFF			0...10 V	2...10 V
	 ON	 ON				4...20 mA

Forced control input

If terminal YF for the forced control input

- is not connected, the valve will follow the Y-signal
- is connected to G, the valve will fully open control path A → AB
- is connected to G0, the valve will close control path A → AB

YF-Function			
	no function	fully open	closed
Connections			
Transfer			

Signal priority

1. Hand wheel position MANUAL (open) or OFF (close)
2. Forced control signal YF
3. Signal input Y

Flow chart

- Δp_{V100} = differential pressure across the fully open valve and the valve's control path A → AB by a volume flow \dot{V}_{100}
- \dot{V}_{100} = volume flow through the fully open valve (H_{100})
- Δp_{max} = max. permissible differential pressure across the valve's control path for the entire actuating range of the motorised valve
- 100 kPa = 1 bar ≈ 10 mWC
- 1 m³/h = 0.278 l/s water at 20 °C

Valve characteristic

Equal percentage

Linear

Mounting notes

Mounting and operating instructions are printed on the actuator and on the electronics module.

Caution  **The valve may only be used as a mixing or throughport valve, not as a diverting valve. Observe the direction of flow!**

A strainer should be fitted upstream of the valve. This increases reliability.

Orientation

Degree of protection valid only when M20 cable gland supplied by the installer.

Access for installation

It is essential to maintain the specified minimum clearance above and to the side of the actuator and/or electronics module! (refer to «Dimensions»)

DN15...DN32 = 100 mm

DN40...DN65 = 150 mm

Use as straight-through valves

Only three-way MX...461... valves are supplied. They may be used as straight-through valves by closing off port «B».

MXG461... screwed valves in straight-through applications

Port «B» can be sealed with the accessories supplied (cover, gasket) and the union nut of the ALG...3 coupling.

MXF461... flanged valves in straight-through applications

Port «B» can be sealed with part Z155/... which must be ordered as a separate item. The part comes complete with blank flange, seal, screws, spring washers and nuts.

DN15...DN32 blank flange (Z155/15F...Z155/32F)

DN40...DN65 blank flange (Z155/40...Z155/65)

Installation notes

- The MXG...461... valves are flat-faced allowing sealing with the gaskets provided with the ALG...3 set of 3 screwed fittings.
- Do not use hemp for sealing the valve body threads.
- The actuator may not be lagged.

For notes on electrical installation, see «Connection diagram»

Maintenance notes

The valves and actuators are maintenance-free.

The low friction and robust design make regular servicing unnecessary and ensure a long service life.

The valve stem is sealed from external influences by a maintenance-free gland.

If the red LED is lit, the electronics must be recalibrated or replaced.

Repair

Should the valve electronics prove faulty, the electronics module must be replaced by the ASE1 (DN15...32) or ASE2 (DN40...65) replacement electronics module. Mounting Instructions no. 35678 are included.

Caution  **Always disconnect power before fitting or removing the electronics module.**

After replacing the electronics module, calibration must be triggered in order to optimally match the electronics to the valve (refer to «Calibration»).

Caution  **Under operating conditions within the limits defined by the application data, the actuator will become hot, but this does not represent a burn risk. Always maintain the minimum clearance specified, refer to «Dimensions».**

Disposal

The actuator must not be disposed of together with domestic waste. This applies in particular to the PCB.

Legislation may demand special handling of certain components, or it may be sensible from an ecological point of view

Current local legislation must be observed.

Warranty

Application-specific technical data must be observed.

If specified limits are not observed, Siemens Switzerland Ltd / HVAC Products will not assume any responsibility.

Technical data

Functional actuator data

Power supply

Extra low-voltage only (SELV, PELV)
